VAN ALLEN

PROFILE

Result-driven front-end engineer & detail-oriented graphic designer. Over 10 years of professional experience building websites and applications. Proficient in front-end development, project management, artistic direction, strategic implementation, and quality assurance.

EMPLOYMENT HISTORY

Software Engineer, Epsilon Data Management, LLC

Dec 2018 - present   ⚲ Chicago, IL

As a Software Engineer, I work on a small Agile team with a start-up mentality. We build and maintain proprietary web-based applications as well as extensions for existing applications such as the Adobe Creative Suite. Daily activities and responsibilities include:

· Work as both an architect and developer on various client-side and server-side projects
· Prototype innovative solutions and create proprietary products
· Automate tasks related to testing, deployment, and continuous integration
· Develop and maintain essential JS packages, such as common libraries, plugins, and utilities
· Mentor and guide junior engineers in their professional growth
· Collaborate with project managers to identify necessary features & requirements for creating epics
· Design and maintain end-to-end test suites for the entire technology stack
· Develop technologies for monitoring the system's performance
· Project management and communication via JIRA and other related systems

Front-end Engineer, Conversant LLC

Aug 2016 - Dec 2018   ⚲ Chicago, IL

On the creative side of a technology company, there was a constant need to elevate designs and integrate interactive experiences. I worked on global client projects in an Agile environment. Daily activites included:

· Organized strategic imperatives collaborting with art directors, producers, and Ui/Ux teams
· Formulated team-wide animation improvements and implemented Ui/Ux standards
· Improved process updates for quality assurance, maintenance, and debugging
· Standardized development in svg asset generation, workflow integration, design, and adaptability
· Initiated prototype development of new modular components and breakout technologies
· Researched & Developed high-level execution animation within digital advertising mediums
· Co-lead Git workflow integration, establishing a team-wide adaptation
· Managed SCRUM, team-wide calendar management, and level loading operations

Full-stack Developer, Belmont Publications Inc.

Oct 2012 - Aug 2016   ⚲ Santa Ana, CA

As the Developer and Designer, I managed the ecosystem of websites for the company and its various products. My team worked to improve and replace outdated systems. Daily activites included:

· Introduced content management systems, hosting services, and production procedures
· Improved processes surrounding sustainable online content maintenance
· Coordinated art direction for digital articles, research studies, and email campaigns
· Brainstormed sessions to discover new design directives and technological imperatives
· Managed, maintained and documented all web based processes for training purposes
· Collaborated closely with in-house designers frequently on client concepts and presentations

EDUCATION

California State Polytechnic University, BFA in Graphic Design	2012
Fullstack Academy, Javascript Bootcamp	2019
